

FloraMaX

Flowering Enhancer

PK Additive + Cal-Mag-Iron + pH Stabilizer

- **PK Additive:** Contains a carefully balanced combination of Phosphorus (P) and Potassium (K) – this promotes vigorous floral blooms, and optimum flower density
- **Cal-Mag-Iron Additive:** A full dose of Cal-Mag and Iron DTPA prevents the need for a stand-alone 'cal-mag' additive – EVEN with RO or coco coir – this prevents common deficiency symptoms such as yellowing, leaf curl, stunted growth and withered fruit-set
- **pH Stabilizer:** 'Locks' nutrient pH below 6.5 to help prevent pH-related deficiency symptoms – even when hard water or alkaline additives are used. In recirculating systems, many growers find pH is stable for 7-10 days longer than normal
- Dosage 2ml/L (8ml/Gal) | Available in: 250ml // 1L // 5L // 20L // 1000L

NOTE: *This product will solve many of the deficiency issues associated with powdered base products*

Flowering Enhancer replaces PK additives, Cal-Mag-Iron additives and stabilizes pH below 6.5. @floramaxlab, @essence.farm.1

TESTIMONIALS

“Compared to the other PK additives, we see a lot more swell when using Flowering Enhancer.”
We use Flowering Enhancer with our regular nutrient and the improvement in pH stability and solubility was obvious from the outset. There is also no more leaf yellowing from early flower.” ”
