

## Growth-XS

Reduces Veg-Phase by 1-3 Weeks

- Helps reduces veg phase by 1-3 weeks so plants can be “flipped” sooner
- Lowers running costs and enables an extra crop each year
- Prevents transplant shock and stall
- Helps revive stalled vegetative growth
- Is pH neutral and will not cause internodal stretch
- Will NOT cause biofilms, blockages, foaming or odors
- **Dosage:** 0.5-1ml/L (2-4ml/Gal) — use in veg week-2 only.  
Never use in bloom or the final week of veg. For a shorter veg-phase, apply in veg week-1 instead.
- Available in: 50ml // 250ml // 1L // 5L // 20L

**CAUTION:** Organic additive – NEVER use in conjunction with chlorines or peroxides.

### “Purified extracted organics” explained

The chemists at FloraMax have been able to deconstruct popular organic ingredients such as kelp and fulvic acid, then isolate specific ‘beneficial’ organic molecules. These are then incorporated into our additives in a purified and potent form. Importantly, this enables their concentrations to be optimized for maximum nutrient effect, without been hindered by any nuisance chemicals. The result is a range of products that produce unique and tangible results without causing problems such as blocked drippers and pH fluctuation.

Impact of **Growth-XS** on new growth after 7-days use.

Suncoast Hydroponics & Garden Centre

## TESTIMONIALS

“I used to flip after week-5. Now I flip after week-3 and the plants look much stronger going into bloom.”

“The effect of Growth-XS was obvious after just 7-days”

“With Growth-XS there is no signs of stretch, and it creates more centre branching and lateral growth”

”
