

## Pythoff PLUS

Eliminates Toxic Build-Up in Hydroponic Systems

- **Maintains the condition of nutrient solutions** — Prevents blocked drippers and accumulation of nutrient by-products
- **Enhances the weekly 'flush'** — Restores the condition of the rootzone, medium and hardware
- **Maintains 'stored' water (RO and rain water) used for making nutrient solutions** — Maintains its condition to prevent contamination of the working nutrient solution
- **Improves post-harvest system clean-up** — Restores system hardware AND 'recyclable' mediums to avoid contaminating the next crop
- **Pythoff PLUS™ is 'standardized' to a specific concentration and has a shelf-life of 10 yrs plus** — This ensures the correct dosage is applied. Note, underdosing is ineffective and overdosing can harm roots. Note, competing products are generally highly unstable and therefore yield an inconsistent dosage
- **Safe to use from seed to harvest** — gentle on roots
- **Fully compatible with all FloraMax additives.**
- **Dosage:** Nutrient solutions, flush water or stored water: 0.5ml/L (2ml/Gal) | Post-harvest system clean-up: 2ml/L (8ml/Gal)
- Available in: 250ml // 1L // 5L // 20L

**CAUTION:** Incompatible with peroxides, hypochlorous acid, beneficial bacteria or "live" systems.

Pythoff PLUS eliminates nutrient by-products

### TESTIMONIALS

“

*"I had chronic problems with root diseases damaging and killing my plants. Now I find that not only has the damage ceased, but even seriously badly damaged plants can be regenerated".*

*"No more do I see signs of bad stuff in the tanks i.e. clouds of white slimy gack floating in the tanks and collecting on the air stone. Plants are now just scorching along."*

”
