

Resin-XS

The #1 BLOOM BOOSTER for Serious Growers

- **Improves fruit quality and development:** Increases frosting, resin, potency, swell, density and final mass
- **Aids PGR recovery:** Opposes the negative impact of PGRs to dramatically improve final quality e.g. potency, trichomes, color
- **Free from PGR's**
- **The ideal replacement for "finishers", PK additives and bloom boosters.** Its PK-additive component suites any nutrient regime as it is "pH-neutral" and balanced to ensure optimum flower density
- **Will NOT cause biofilms, blockages, foaming or odors**
- Dosage: 2-4ml/L (8-15 ml/Gal) from bloom week 4 to 8.
- Available in: 250ml // 1L // 5L // 20L // 1000L

CAUTION: Organic additive - NEVER use in conjunction with chlorines or peroxides.

FloraMax Resin-XS has an huge impact on trichome size, resin and oil. Resin-XS also aids PGR recovery.

"Purified extracted organics" explained

The chemists at FloraMax have been able to deconstruct popular organic ingredients such as kelp and fulvic acid, then isolate specific 'beneficial' organic molecules. These are then incorporated into our additives in a purified and potent form. Importantly, this enables their concentrations to be optimized for maximum nutrient effect, without been hindered by any nuisance chemicals. The result is a range of products that produce unique and tangible results without causing problems such as blocked drippers and pH fluctuation.

TESTIMONIALS

“When the trichomes pushed out there was easily a third more than normal”.

“What I really enjoy about using your line though is that the buds do not have a PGR look to them and they look natural almost organic in their structure. Secondly the bud sites are huge and filled with resin! (USA Commercial consultant)”
