

Dose Chart ProPowders™ – Combined Stock Solutions

DOSAGE CHARTS

Automated Stock Reservoir System: Based on auto-doser ranging from 0.9 - 1.5%

COMPATABILITY : Hydro / Coco / Soil / Outdoor / LED / HID

The Ultimate System for Minimizing Risk & Labor Costs

A stock solution traditionally contains just one product. Many commercial systems, for example, store a stock solution of "A" salts in one reservoir and "B" salts in the other. There is no capacity for organics, which greatly sacrifices yield quality and value. FloraMax ProPowders™ however, can be combined to create Combined Stock Solutions at 100-fold concentration i.e. The mineral products are stored in Reservoir A, and the organics are stored in Reservoir B.

- ✔ Combined Stock Solutions are stable for over 3 months and are suitable for drippers
- ✔ Only two Combined Stock Solutions are required for veg, and two for bloom
- ✔ Provides healthier roots and foliage, and more stacking
- ✔ Improves bag appeal, flavor and potency

Combined Stock Solutions are added to the working nutrient reservoir via:

- ✔ Auto-doser. Dosing ranges from 0.9 - 1.5%. This is ideal for large commercial systems.
- ✔ Manual dose. Ideal for improving the efficiency of smaller systems or hand feeding

Stock Reservoir A
(100-Fold Concentration)

Stock Reservoir B
(100-Fold Concentration)

**Alternatively, use FloraMax System Maintenance at 2mL/L.*

VERSION 1 DEC 2025: THIS DOSE CHART SERVES AS A GUIDE ONLY. NO RESPONSIBILITY FOR ANY ERRORS OR OMISSIONS IS ACCEPTED.

ProPowders™ vs AB POWDERS

- ✓ Contains both mineral nutrients and 'extracted' organics
- ✓ Dissolves within minutes, even in cold or hard water
- ✓ Ideal for auto-dosers - stock is stable for 6 months plus
- ✓ Healthier roots and foliage and thicker stems
- ✓ More bud sites and stacking
- ✓ Improves bag appeal, flavor and potency

ProPowders™ vs LIQUID NUTRIENTS

- ✓ ProPowders™ have a greater impact on plant growth
- ✓ ProPowders™ can be mixed together as a "dry pre-mix", then stored until required
- ✓ 5x more compact and 7x lighter
- ✓ Dropship world-wide by air
- ✓ Minimal waste packaging

Dosing via Dry Pre-Mix

Dry powders can be added directly to the reservoir, either individually or as a dry pre-mix.

- ✓ Dissolves within minutes
- ✓ Dissolves in cold or hard water

Why use a dry pre-mix?

- ✓ Can be prepared in advance, then stored
- ✓ If made by trusted staff, the risk of human dosing error and recipe theft is reduced

100% Soluble

ProPowder™ stock solutions will dissolve in cold or hard water within minutes. High solubility reduces blockages, clean-up and the need for warm RO water. Stock is stable for at least 6 months, which is ideal for auto-dosers and drippers.

FloraMax Products

BASE NUTRIENT

Veg-1™

1-PART UNIVERSAL BASE NUTRIENT

1. ONE formula for Veg & Bloom 2. Fewer deficiencies & extremely clean 3. Suitable for hydro, coco, & soil

CORE ADDITIVE

Root-XS™

ORGANIC ROOT ACCELERANT

1. Accelerates root development & reduces stall 2. Will NOT cause biofilms

CORE ADDITIVE

Flowering Enhancer

PK + CAL-MAG-IRON + PH STABILIZER

3-in-1 Flowering Additive: 1. Promotes bud swell 2. Prevents deficiencies 3. Assists to keep pH below 6.5

OTHER ADDITIVE

Growth-XS™

ORGANIC VEG ACCELERANT

1. Reduces veg phase duration by 25% 2. Enables an extra crop each year 3. Will NOT cause stretch or biofilms

CORE ADDITIVE

Resin-XS™

ORGANIC RESIN ENHANCER

1. Increases frosting, resin, density & mass 2. Replaces bloom boosters & 'finishers' 3. Will NOT cause biofilms

CORE ADDITIVE

OrganaBud™

ORGANIC ENHANCER FOR PLANT STRUCTURE & FRUIT QUALITY

1. Promotes branching, stacking & terps 2. Will NOT cause biofilms

OTHER ADDITIVE

Pythoff PLUS

ELIMINATES TOXIC BUILDUP

1. Prevents root browning, pests & blockages 2. Treats nutrient solutions, flush water & stored water

OTHER ADDITIVE

System Cleaner

ORGANIC PREVENTATIVE FOR BIOFILMS

1. Prevents biofilms to ensure clean drippers & lines 2. Fully compatible with organics & beneficial bacteria

*Replaces System Maintenance

Dose Chart **Combined Stock Solutions Guidelines & Directions**

GENERAL OPERATIONS & SETUP

Combined Stock Solutions

General Instructions

For auto-dosers, ensure they can operate between the range of 0.9 and 1.5%. To produce combined stock solutions at 100-fold concentration, fill reservoir A and B to about 90% full, then add each product followed by the remaining water. Stir thoroughly or employ a mixing pump. NEVER add silica products, peroxide, chlorine, ozone or UV. pH adjustment for each reservoir is usually not required. Reservoir A should typically be pH 2.7–3.3 and Reservoir B, pH 5.5–7.5.

Avoiding mold growth: Ensure FloraMax System Cleaner (or System Maintenance) is being used. Keep reservoirs covered to avoid light ingress. In some situations it may be necessary to slightly raise the cover so that the head space is ventilated. Periodically drain then bleach reservoirs (as required). Before making batch, ensure reservoir is sterile. Use clear and fresh (sterile) make-up water. If unsure, treat water with Pythoff PLUS (0.5ml/L), then store in the dark for at least 24 hours prior to use.

Dry Pre-Mix

FloraMax ProPowders™ can be combined as a dry pre-mix. For example, for Reservoir A in Bloom, the dose for Veg-1 and Flowering Enhancer can be combined together prior to adding to the reservoir. This can be stored prior to use but ensure the container is air-tight and stored away from direct sunlight, preferably below 25°C (77°F).

Auto-Flowering Plants

After week-2 of the Vegetative phase, switch straight to Bloom week–1 schedule.

Caring for Mother Plants

Follow Vegetative week–2 schedule.

Resin & Oil Production

For improved results, increase Reservoir B doser to 1.5% throughout bloom.

ENVIRONMENTAL ADJUSTMENTS

Final pH

pH of the combined diluted output from Reservoir A + B should be between 5.5 and 6.5. To maintain this, employ an auto pH doser.

CO₂ Injection

(Above 800 ppm)

Increase doser on Reservoir A to approx 1.3%, or increase Veg-1 rate by 40g/L.

Using High Light Intensity

(PPFD above 1,200)

Increase doser on Reservoir A to approx 1.3%, or increase Veg-1 rate by 40g/L. Also, add 1:1 ratio of CO₂ e.g. 1,400 PPFD requires 1,400ppm CO₂.

MAINTENANCE & TROUBLESHOOTING

Root Zone Care & Flushing

For rootzone maintenance, add Pythoff PLUS to a dedicated, 3rd stock reservoir at 50ml/L and set doser to 1.0%. Ensure this reservoir is covered to prevent light ingress and replenished monthly.

If required, flush root-zone with plain water every 7–14 days. Include 0.5mL/L Pythoff PLUS and ensure pH 5.0 - 6.0.

Preventing Reservoir Buildup

Avoid running air stones or mixing pumps for more than 1 hour/day.

Fixing Nutrient Deficiencies

Increase Veg-1 by 20–40g/L or Reservoir A doser by 0.15–0.3%. Feed more often and ensure 10-15% run-off.

Maintaining Stored Water

(eg. RO or Rainwater)

Treat weekly with 0.5mL/L Pythoff PLUS.

Preventing Foliage Burn

Feed until 10-15% run-off. Feed and flush more regularly.
